SVB International Launches Plug & Play (P2P) DVR

Written by NCN News Network
Friday, 29 March 2013

SVB International launched newest network-based standalone DVR LX4 (4 Audio and 4 Video). This is based on (P2P) new latest technology Plug and Play DVR. This DVR is specially designed for built-in free DDNS (ARSP), make the network connection very easy and simple a friendly user interface and multi-channel real-time monitoring. Offered in an attractive price range, this DVR Series is the perfect recording solution for homes, offices or industries. We are excited to launch the much-awaited Plug and Play Stand alone DVR.

The LX-4 features high quality 4CIF recording in real time across its up to 4 channel. 4 CH H.264 Compression DVR, remote Live viewing allowing users to access their video anytime and anywhere over the internet. This DVR further supports alarm functionality with motion and tampering detection. When critical events (such as theft) occur within owner's premises, this DVR's alarm event recording is triggered, generating instant notification via E-mail to allow owners the ability to take whatever proactive response they deem necessary.

This plug and play DVR also incorporates a highly intuitive user interface with friendly apps and widgets. For this series of DVR No DDNS server is required, No port forwarding and No need of static IP. Supports digital Zoom In both preview and playback, Simultaneously multi-channels record & real-time playback, multi-users on network, USB back up, network browse CMS Client Software, IE, Google Chrome, Mozilla Firefox 3.5.2 browsing, Real-time live display up to 4 Cameras with 1080 high definition, multi function Live recording, playback, backup & remote access, Dual Encoding streams flexible for network transmission and cell phone and tablet monitoring, mobile support: I Phone, Android Phones, Nokia (Symbian 3&5), Blackberry, Built in DDNS Support, Main processor: industrial-strength embedded microcontroller ZHIYUAN chipset from Taiwan and many more features.
